SAFETY FEATURES FOR RIDERS

SAFETY FEATURES FOR DRIVERS

General info

Yango transforms global technology for local enrichment and helps people around the world to improve their everyday life. When it comes to safety, we use the cutting-edge technology to provide features that keep both users and drivers safe.

Before, during & after the ride

Safety is always on when it comes to Yango. We provide features that keep both passenger and driver safe before, during and even after the ride.

Verified drivers

Depending on the region, the driver undergoes various checks:

- The driver's licence verification
- Vehicle document verification

Every driver who registers in the app goes through an onboarding process.

Display of driver's information

Yango provides passengers with the following information about the driver:

- Driver's name — the passenger can check out the name of the driver assigned to the trip request
- Driver's photo — the passenger can check out the driver's photo and can compare it with the real driver
- Driver's rating — the passenger can see how other users rated the driver's driving

Safety center

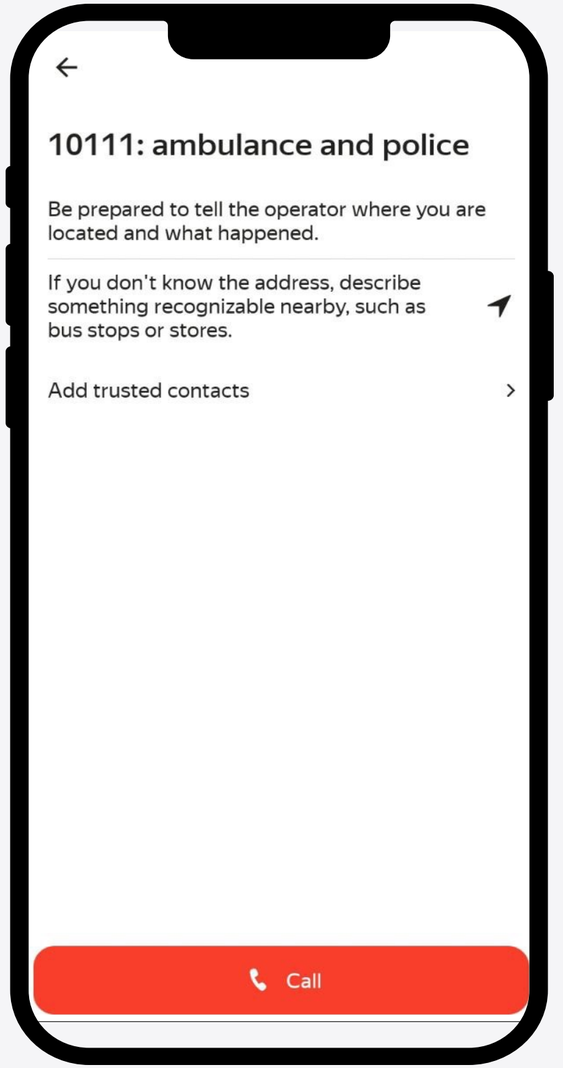

In the user's app the passenger has access to the safety center which is available before, during and after the ride (the detailed information on each safety feature is highlighted in the stories). The safety center includes 3-4 features : SOS-button to connect fast with the local authorities, route-sharing and emergency situation feature.

SOS-button — when the passenger taps the button, the systems initiates the call to the local authorities. With this feature the passenger can get the assistance fast in case of emergency.

Emergency situation button — the passenger can reach a support team (varies by country).

Share route button — the passenger can share the details of the ride (pick up point & destination point, the driver's name, car plate number and the route in real time) with the contacts from the phone book.

Trusted contacts — the passenger can share his/her route with the trusted contacts, so the chosen contacts are able to follow the ride.

Support incident team

Support incident team for users is a separate team of agents who solves requests that are out of the basic logics and relate to any sort of personal conflicts between passengers and drivers. Process for solving those cases includes more steps, team is specifically trained to deal with the «Urgent» cases.

Main goals of Support incident team for users is to help the users, protect other users and reduce the reputational risks for the service.

Speed Control

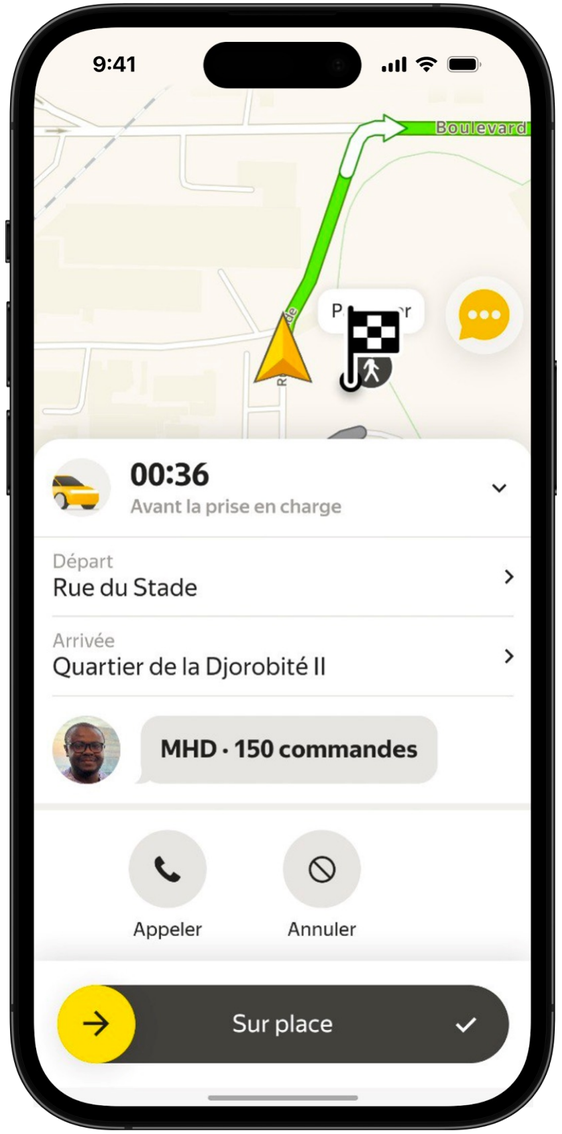

WHEN THE DRIVERS RECEIVES AN ORDER

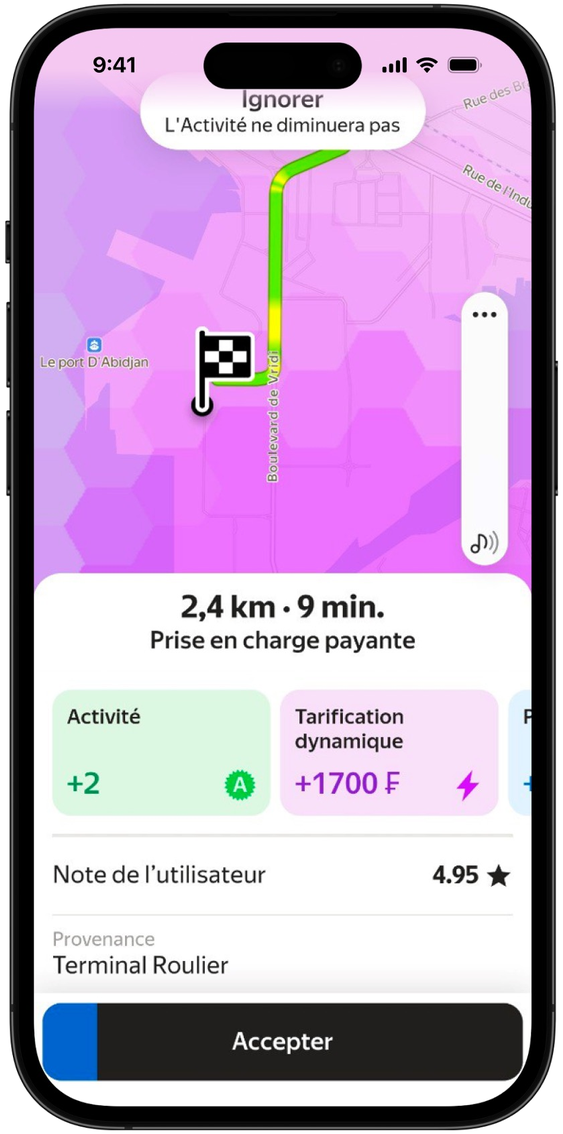

Display of rider's information

Depending on region, the driver can see the following information about passenger:

- Name
- Photo
- Rider's trips threshold. i.e. (10+, 30+, 50+ Trips, etc.)
- Rating

This information can help the driver to make an informed decisions about accepting or canceling a trip request.

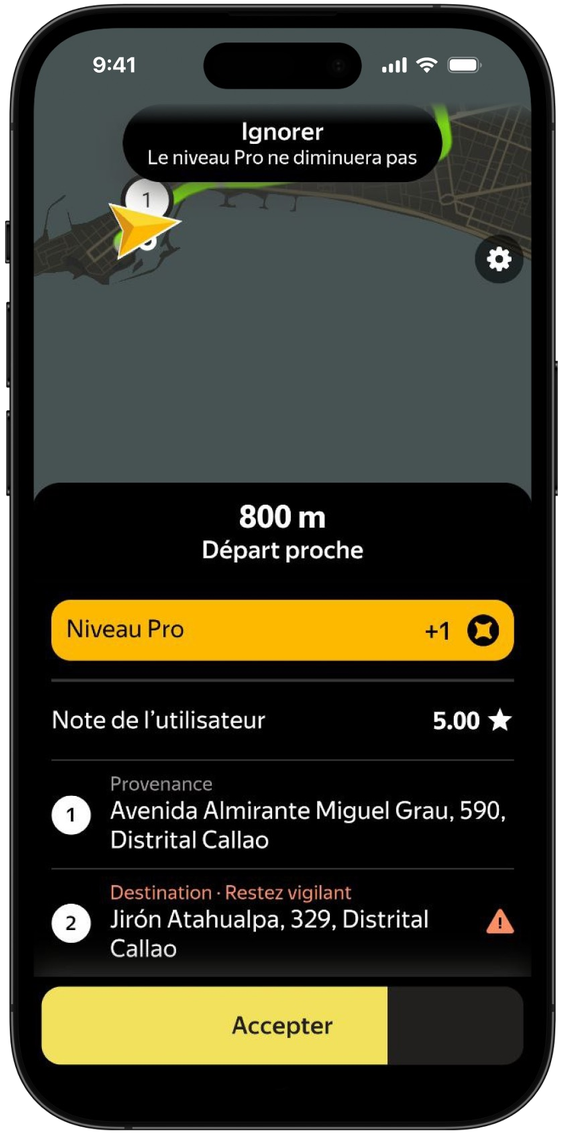

WHEN THE DRIVERS RECEIVES AN ORDER

Alert for unsecured areas

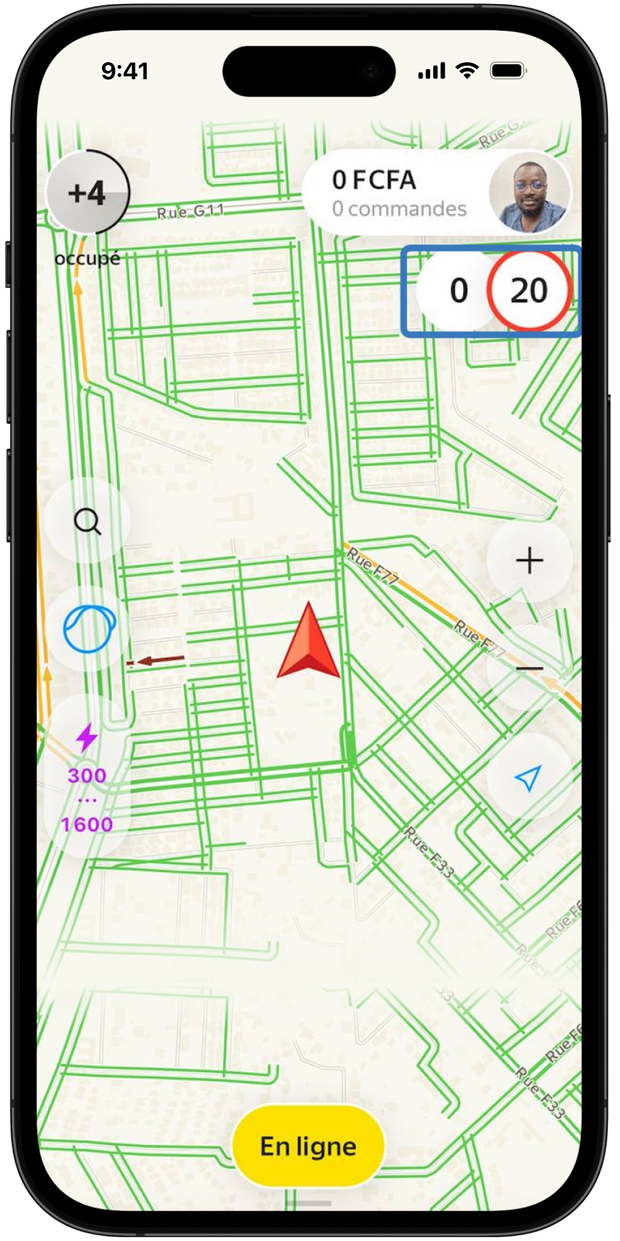

Some cities may have insecure areas where drivers should be alert. If driver receives a trip request from or to an insecure area, he/she can cancel the trip without penalty. The destination point is also displayed in the app to help the driver make an informed decision.

Speed control feature

Speed control feature monitors the speed. During the order the technology uses GPS to track the driver's road track and determine his speed. This speed is compared to the maximum speed allowed in that section according to the data from the navigator, which is used to build routes.

If the driver exceeds the allowed speed, the system alerts him via the driver's app.

Incident support team

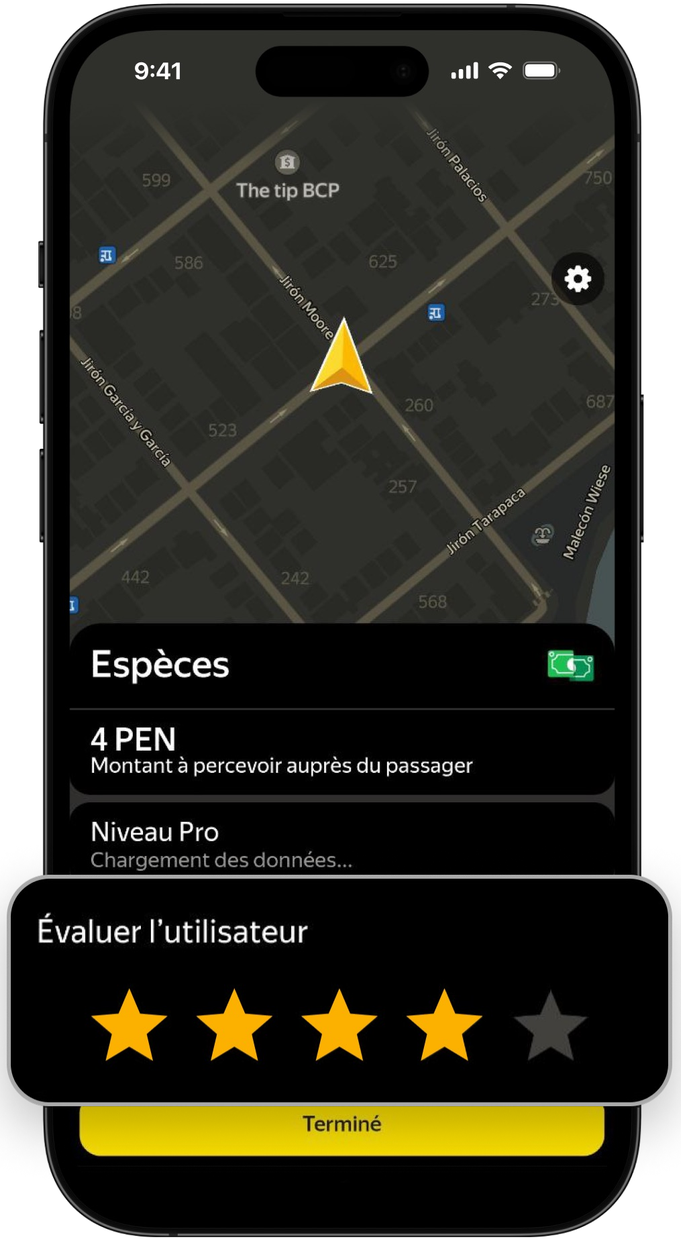

In case of any urgent or critical issue with a passenger, the driver can contact the support team. Support team staff are accustomed to resolving conflicts between drivers and passengers. They do everything possible to protect drivers and minimize reputational risks.

Riders rating

The driver can rate the passenger after the ride.

This can help other drivers to make decision about accepting the passenger's trip request **in late hours**. This feature also helps Yango improve its service based on driver feedback.
